Machine Learning & Data Engineer

Machine Learning Engineer with a strong software engineering background, experienced in building and deploying machine learning solutions from data preparation to production integration. Skilled in combining machine learning, backend development, and data engineering to deliver reliable, real-world applications.

Technical Skills

- **Programming:** Python, SQL, JavaScript, HTML&CSS
- **ML & Data:** Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, MLflow
- **Data Engineering:** ETL pipelines, data preprocessing, Airflow, batch processing
- **Backend & APIs:** Django, Flask, FastAPI
- **Cloud & DevOps:** Docker, AWS, Azure, Linux, CI/CD
- **Databases:** PostgreSQL, MySQL, MSSQL
- **Tools & Workflow:** Git, debugging
- **Methodologies:** Agile (Scrum, Kanban)

Experience

2025 – Present

Machine Learning & Data Engineer – Postbank

- Developed and deployed machine learning models for customer behavior prediction and automated decision-making systems.
- Designed and implemented ML pipelines for training and batch inference, including data preprocessing, feature engineering, model training, deployment and monitoring.
- Built model monitoring system to track performance degradation and data drift in production, enabling continuous model improvement.
- Collaborated with business and risk teams to translate business requirements into production ML solutions.
- Improved model performance through feature engineering and hyperparameter optimization, achieving measurable uplift in predictive performance.
- Mentored junior engineers and contributed to defining internal best practices for ML development, deployment and data processing workflows.

2023– 2025

Backend Developer – Haemimont AD

- Built and optimized high-performance REST APIs for data-intensive backend systems.
- Designed data pipelines for validation, transformation, and aggregation of structured datasets used in production systems.
- Improved backend performance and scalability through system and query optimizations.
- Led migration of legacy components to a modular architecture, improving maintainability and deployment reliability.

2021– 2023

Freelance Software Developer

- Developed custom Python applications and backend services for clients.
- Built web applications and REST APIs.
- Designed data processing and automation solutions.

Education

Bachelor's Degree in Bulgarian Language and History

University of Veliko Tarnovo, Bulgaria

Professional Training

- AI & Machine Learning
- Software Engineering with Python

Languages

- Bulgarian — Native
- English — Professional Working Proficiency
